- **Programming with Python (Coursera)**
  University of Michigan
  [View Certificate]

PROJECTS

Microsoft Power Platform

Centralized Employee Master Database (Azure Entra ID)

- Built an automated Power Automate flow to unify data from two sources: Azure Entra ID (personal details) and a manually maintained Excel file (office details).
- Scheduled the flow to run daily in the morning, fetching required columns from both data sources.
- Implemented duplicate detection to skip existing records and ensure only new/updated entries are merged.
- Generated a consolidated Excel file for reporting and analytics, accessible in multiple Power Apps.
- Enabled real-time access for HR and management teams to a single source of truth for employee data.

Reminder App

- Developed a SharePoint-integrated reminder system to automate email alerts for tasks/events.
- Configured dynamic reminder dates and expiry tracking to ensure continuous follow-up until task completion.
- Allowed customization of reminder frequency and conditions based on task priority.
- Integrated with departmental workflows for seamless adoption without disrupting existing processes.

Multi-Level Approval Workflow System

- Created a Power Automate approval process with up to 5 sequential approval stages.
- Configured stage progression based on user roles, business rules, and conditional triggers.
- Automated deadline reminders and escalation emails to reduce delays.
- Linked workflow stages to SharePoint lists for live progress tracking and audit logging.

Suggestion Award Scheme Portal

- Designed a submission portal where employees can register improvement suggestions or complaints.
- Implemented a 3-step review system: immediate higher authority, secondary reviewer, and central committee.
- Added a central committee review screen to record decisions and provide feedback.
- Automated point-based reward calculation and certificate generation for approved suggestions.
- Built a dedicated HR dashboard to oversee all suggestions, approvals, and rewards in real time.

Shop Complaint Register Portal

- Created a centralized complaint portal with a clean, role-based UI for submitting and tracking issues.
- Integrated a complaint-specific chat system for real-time discussions between involved parties.
- Automated report generation based on final chat decisions and complaint resolution status.
- Added automated email updates for every complaint progress change.
- Allowed users to control complaint visibility — enabling them to share cases with specific recipients or open them to broader access.
